

Diogo Oliveira

Full-Stack Developer

☎ +351 917 887 264 • ✉ diogo.mto123@gmail.com • [LinkedIn](#) OliveiraDiogo1 • [GitHub](#) OliveiraDiogo1

Full-Stack Developer with hands-on, end-to-end experience building software solutions using Vue.js/React.js, C#/.NET, and SQL. Currently responsible for the development of internal and external projects, owning the full lifecycle from requirements gathering to production deployment via DevOps pipelines on AWS. Delivered a real-time IoT monitoring API that enabled production analytics for an industrial client and modernized legacy ERP interfaces into responsive, maintainable applications.

EXPERIENCE

F.Rego – Corretores de Seguros

Vila Nova de Gaia (Hybrid)

Full-Stack Developer

Mar 2026 - Present

- Responsible for the end-to-end development of internal and external software projects for the insurance brokerage, from requirements gathering and solution design through development and production deployment.
- Develop full-stack features using React.js, Python, C# (.NET) and SQL, delivering scalable web applications tailored to business and client needs.
- Design and implement DevOps pipelines and cloud deployments on AWS and Google Cloud Run, provisioning infrastructure as code with Pulumi for AWS environments.
- Enforce code quality and security standards by integrating static analysis tools such as Qodana and Semgrep into the development workflow.
- Provide ongoing maintenance and support across the company's application portfolio, ensuring reliability and performance in production.

SISTRADE – Software Consulting S.A.

Porto (Hybrid)

Junior Full-Stack Developer

Jul 2024 – Mar 2026

- Designed, developed, and maintained core features of the company's ERP software using Vue.js, ASP.NET, and .NET Core, modernizing legacy screens into responsive, contemporary interfaces.
- Optimized backend database performance by developing stored procedures, complex queries, triggers, and scheduled jobs in Microsoft SQL Server.
- Built a custom REST API to collect, process, and manage real-time data from factory machinery and IoT sensors, enabling production monitoring and analytics for an industrial client.
- Contributed to the European Defence Operational Collaborative Cloud (EDOCC) project, developing a specialized event-logging API to validate partner-system data.
- Designed and implemented a Vue.js-based form to manage employee position data, including database schema design in Microsoft SQL Server, as part of an internal HR tool.

EDUCATION

MSc in Software Engineering – Instituto Superior de Engenharia do Porto (Part-Time)

Oct 2024 – Present

BSc in Computer Science – Universidade Portucalense Infante D. Henrique

Sep 2024
